Awnletted

**Winterhardiness**

Good

**Standability**

Very Good

**Average Seed Size**

15,000 Seeds per LB

**Seeding Rate Range**

72 LBS per Acre

P919 Winter Barley is an awnletted variety that works very well for grazing and haying systems in the Central and Southern Plains. It has very fast emergence in the fall with good growth for grazing potential. It has also been an excellent component to fall cover crop mixes. P919 has the ability to be an excellent grain producing variety that can be utilized for excellent livestock feed. This winter barley is versatile and widely adapted across most of Kansas and south.
