Height	39-42 Inches
Crown Rust	Moderately Resistant
Barley Yellow Dwarf	Moderately Resistant
Standability	Good
Average Seed Size	14,000 Seeds per LB
Seeding Rate Range	64 LBS per Acre

2019 Release from South Dakota State University. Rushmore is a newer line that is an earlier maturity that allows for it to be used for a grain or forage crop option in Kansas. It has had an excellent trial history for production in both grain and forage production over multiple cropping seasons. It also has a record of producing good quality forage along with overall tonnage.
